Report on the Awareness of PCOS and Its Impact on their Health Amongst Young Women in India

A group of 6 students from HNIMR conducted a survey on the Awareness of PCOS and Its Impact on their Health Amongst Young Women in India in collaboration with BKWSRC. The survey aimed to identify and address the lives of those affected by PCOS and to help them to overcome their symptoms as well as prevent and reduce their risks for life-threatening related diseases such as diabetes, cardiovascular disease, non-alcoholic fatty liver disease and cancer. The students visited nearby areas to gather data on issue.

They interviewed the women employees working in Maharshi Karve Stree Shikshan Samstha (MKSSS) in Pune to gain a comprehensive understanding of the challenges. The survey findings were compiled into a detailed report that highlighted the key issues and proposed solutions.

The report was shared with BKWSRC and college authorities to facilitate the implementation of necessary interventions. HNIMR's involvement in this social awareness initiative demonstrates its commitment to social responsibility and its efforts to bridge the gap between academia and community development.
